Statistical Standard Series

Standard Country or Area Codes for Statistical Use

Endorsed by the IDWG-TTF on Statistics

31 August 2023 (Version 15)

The document recommends the classification for geographical areas to be used in all FAO data collection, data processing and dissemination activities, including the Statistical Working System (SWS) and the FAO publications. It is based on the document originally prepared by the FAO interdepartmental standards team.

The original standard document was endorsed by the Statistical Coordination Working Group (SCWG) in 2012¹.

Standard: M49 country or area list

BACKGROUND

Recalling the Fundamental Principles of Official Statistics² and the FAO Quality Assurance Framework³, the United Nations “Standard Country or Area Codes for Statistical Use” (originally published as Series M, No.49), commonly known as “M49” and owned by the UN Statistics Division (UNSD), is adopted as FAO statistical standard for the classification of geographical areas, which includes the encoding scheme for countries or areas, regions and areas.

The M49 list of active codes is available on UNSD website⁴ and is presented in Annex 2 to this document.

TECHNICAL RECOMMENDATIONS

- The M49 country or area codes and descriptors (names) are to be used as the FAO standard. The list is to be used in all FAO data collection, data processing and dissemination activities, including the Statistical Working System (SWS) and the FAO publications.
- The names of countries or areas refer to the short form used in day-to-day operations of the UN and FAO and not necessarily to their official name as used in formal documents.
- The standard here presented is composed of:
 - The list of countries or areas: 255 M49 *active* country or area codes, of which:
 - 250 are included in the standard M49
 - 2 are added by FAO in agreement with UNSD (codes 158 and 836)
 - 3 are added by FAO for internal purpose only (codes 381, 412 and 835)
 - The list of M49 *former* country or area codes to archive old time series
 - The composition of regional and other groupings
- The M49 is modified for FAO statistical purposes only in the following cases, discussed and agreed with UNSD:
 - The FAO legal term “Palestine” (available in FAO NOCS as of 24 April 2018) is used in place of the M49 descriptor “State of Palestine”, in line with the FAO legal recommendation. As of May 2018, the descriptor “Palestine” is available in the names of countries database⁵ (NOCS).
 - The code and descriptor for “Taiwan, Province of China” is added thanks to a bilateral agreement between FAO and China. In this way the principle of “One China” is respected but at the same time it is possible to publish statistics about Taiwan, which otherwise is

² <https://unstats.un.org/unsd/dnss/gp/fundprinciples.aspx>

³ <http://www.fao.org/docrep/019/i3664e/i3664e.pdf>

⁵ <http://termportal.fao.org/faonocs/appl/>

not represented in M49. As of May 2018, the descriptor “Taiwan, Province of China” is available in the names of countries database⁶ (NOCS).

- “Kosovo” is added for FAO statistical purposes (as per IDWG members request). As of May 2018, the descriptor “Kosovo (Serbia)” has been agreed with FAOTERM. This code is however for internal use only and data on “Kosovo (Serbia)” should not be disseminated.
 - “United Republic of Tanzania, Zanzibar” is added for FAO statistical purposes (as per IDWG members request). As of May 2018, the descriptor “United Republic of Tanzania, Zanzibar” has been agreed with FAOTERM.
 - “United Republic of Tanzania, mainland (ex Tanganyika)” is added (as per IDWG members request). This code is however for internal use only and data on “United Republic of Tanzania, mainland (ex Tanganyika)” should not be disseminated.
 - “Italy - San Marino - Holy See” is added (as per IDWG members request). This code is however for internal use only and data on “Italy - San Marino - Holy See” should not be disseminated.
- The use of codes for “not elsewhere specified” territories should be avoided as much as possible or limited exclusively to cases where the territory is unknown, or cannot be disclosed for confidentiality issues or political concern, or when the territory is composed of a basket of multiple countries (as in the case of aid data).
 - Treatment and hierarchy of non-governing territories and special administrative regions: the M49 list does not include a full set of combinations for countries including/excluding dependencies (non-governing territories, special administrative regions etc.). When needed, it is recommended to apply a footnote/metadata to the main country code to distinguish whether dependencies or external territories are included or not in the published statistics.

The introduction of all combination of country/non-governing territory codes is not practical for the following reasons:

- while in theory these combination codes remove ambiguity, in practice they can be difficult to maintain and use consistently for data collection and dissemination.
 - in most instances it is not even possible to provide data for all these combinations; therefore establishing codes for all possible combinations of country/non-governing territories would be redundant in many instances and introduce the risk of double counting.
- In accordance with [Administrative Circular 2021/13](#), statistical information (publications and databases) must be accompanied by the following FAO’s standard disclaimer:
 - *“The designations employed and the presentation of material [in this information product/in this document/on this website] do not imply the expression of any opinion whatsoever on the part of the Food and Agriculture Organization of the United Nations (FAO) concerning the legal or development status of any country, territory, city or area or of its authorities, or concerning the delimitation of its frontiers or boundaries”.*

⁶<http://termportal.fao.org/faonocs/appl/>

GOVERNANCE PROCEDURES

- The UN Statistics Division (UNSD) is the custodian of M49: the list of M49 active codes is available on the UNSD website, while former country codes are maintained by UNSD in a list which is not for public dissemination (available upon request⁷).
- Proposals for extension or modification of the standard have to be submitted for approval to the Office of the Chief Statistician⁸ (OCS) and cc the IDWG Technical Task Force list⁹.
- Any decisions taken by OCS concerning the modification of M49 in FAO will be discussed in coordination with UNSD.
- Any ad hoc solution made without due consultation with FAO OCS and UNSD is to be avoided.
- Technical units should ensure that the list of countries and groupings used in data management and dissemination across all FAO statistical domains is compliant to the standards described in Annex 2 and to its revisions.
- Regional groupings will be updated by OCS as needed.

⁷ UNSD website provides some information about former codes in the “Recent changes” section at: <https://unstats.un.org/unsd/methodology/m49/>

Annex 1: M49 features

- The M49 classification of geographical areas is developed by the UN Statistics Division for statistical purposes specifically and as a tool to be used by international agencies to standardize reporting and presentation of international statistics.
- M49 has been identified as the primary code list for reporting and exchanging SDG indicators¹⁰.
- As of April 2018, M49 is already in use in the SWS, based on the recommendation and standard document produced by the FAO interdepartmental standards team and endorsed by the Statistical Coordination Working Group (SCWG) in 2012.
- Given its nature of a statistical standard, country and area names in M49 refer to the short form used in day-to-day operations of the United Nations, not necessarily to their official name, as used in formal documents¹¹.
- M49 is maintained in parallel to ISO 3166 list, the International Standard for country codes¹², which is mainly used for administrative purposes.
- In M49, each country is assigned a unique three-digit numerical code¹³ obtained by arranging the countries in English language alphabetical order and assigning an ascending number to each country.
 - Codes are assigned not only to countries but also to geographical, political, or economic areas (e.g. continent, country, specific group of developed or developing countries).
 - Intervals are provided in the numerical sequence, to allow for future extension of the list.
 - Codes assigned in the system are changed when the territorial extent of the country or area changes significantly (exceptions apply in some cases).
- It is noted that the M49 used in UN Comtrade for trade statistics provides an adaptation of the M49 official list made for trade statistics purpose. This is the reason why “Italy - San Marino - Holy See” and United Republic of Tanzania, mainland (ex Tanganyika) were added to the M49 country and area list for internal purpose only.

¹⁰ With minor exceptions: M49 SDG indicators list does not include 074 Bouvet Island, 680 Sark; it includes 010 Antarctica with 260 French Southern Territories.

¹¹ Names adopted by the UN Statistics Division are based on Terminology Bulletin No. 347/Rev.1: Country Names (United Nations publication, Sales No. A/C/E/F/R/S.97.I.19), a comparative listing in the six official languages of the United Nations, in English alphabetical order prepared by the Department of General Assembly Affairs and Conference Services of the United Nations Secretariat.

Annex 2: M49 country or area list (active, as of June 2022)

A NOTE OF CAUTION: The designations employed and the presentation of material of this list do not imply the expression of any opinion whatsoever on the part of FAO concerning the legal status of any country, territory, or area or of its authorities, or concerning the delimitation of its frontiers or boundaries.

530	Netherlands Antilles [former]	Active from 1 Jan 1986 to 10 Oct 2010.
532	Netherlands Antilles [former, pre-1986]	Active up to 1 Jan 1986.
582	Pacific Islands (Trust Territory) [former]	Active up to 1991.
891	Serbia and Montenegro [former]	Active up to 3 Jun 2006.
736	Sudan [former]	Active up to 9 Jul 2011.
810	Union of Soviet Socialist Republics [former]	Active up to 1991.
872	Wake Island [former]	Active up to 1986.
402	West Bank [former]	Active up to 1995.
886	Yemen [former]	Active up to 22 May 1990.
890	Yugoslavia [former]	Active up to 1992.

Annex 4: Regional and other groupings

This annex provides the composition of geographical regions and other groupings relevant to FAO dissemination of statistical outputs according to the M49 standards. It includes:

(a) **M 49 Geographical groupings** is based on 6 continents; these continental regions, except Antarctica, are further subdivided into 17 sub-regions and 8 intermediary regions. These groupings have been assigned to FAO M49 country and area list to be disseminated or used in regional aggregates.

(b) **Other groupings.** These groupings have been assigned to M49 country and area list to be disseminated.

- The list of **least developed countries** (LDCs), as of December 2020, is defined by the United Nations General Assembly in its resolutions A/RES/2768, A/RES/49/133, A/RES/3487, A/RES/46/206, A/RES/32/99, A/RES/3487, A/RES/32/92, A/RES/37/133, A/RES/41/186, A/RES/55/253, A/RES/67/136, A/RES/58/112, A/RES/40/233, A/RES/75/128. It doesn't consider territories.
- **Landlocked Developing Countries** (LLDCs) are developing countries that lack territorial access to the sea. The definition doesn't consider territories.
- **Small Island Developing States** (SIDS) were recognized as a distinct group of developing countries facing specific social, economic and environmental vulnerabilities at the Rio Earth Summit in 1992. The definition doesn't consider territories.

Low Income Food Deficit Countries (LIFDCs): The list is maintained by FAO. The classification of a country as low-income food-deficit used for analytical purposes by FAO is determined based on three criteria. First, a country should have a per capita Gross National Income (GNI) below the "historical" ceiling used by the World Bank to determine eligibility for assistance by the International Development Association (IDA) and for the 20-year IBRD terms, applied to countries included in World Bank's categories I and II. The newly updated LIFDC list is based on the GNI for 2021 (estimated by the World Bank using the Atlas method) and the historical ceiling of USD 2 045 for 2021. The second criterion is the net food trade position (i.e. gross exports minus gross imports) of a country averaged over the last three years for which statistics are available, in this case 2019, 2020 and 2021. Trade volumes for a broad basket of basic foodstuffs (cereals, roots and tubers, pulses, oilseeds and oils other than tree crop oils, meat and dairy products) are converted and aggregated by the calorie content of the individual commodities. Third, the self-exclusion criterion is applied if a country meeting the above two criteria specifically requests to be excluded from the LIFDC category.

Furthermore, in order to avoid countries changing their LIFDC status too frequently – typically reflecting short-term, exogenous shocks – an additional factor was introduced in 2001. This factor, called "persistence of position" postpones the "exit" of a LIFDC from the list, despite the country not meeting the LIFDC income criterion or the food deficit criterion, until the change in its status is verified for three consecutive years. In other words, a country is taken out of the list only in the fourth year, after confirming a sustained improvement in its position for three years in a row.

- **Net Food Importing Developing Countries** (NFIDCs): the list is maintained by the WTO Committee on Agriculture. Criteria identified by the Committee on Agriculture's Decision G/AG/3 are the following: (a) *least developed countries as recognized by the Economic and Social Council of the United Nations; plus (b) any developing country Member of the WTO which was a net importer of basic foodstuffs in any three years of the most recent five-year period for which data are available and which notifies the Committee of its decision to be listed as a Net Food Importing Developing Country for the purposes of the Decision.* Latest update by WTO: March 2023.
- **Income level.** This list is maintained by the World Bank and updated annually. Economies are currently divided into four income groupings: low, lower-middle, upper-middle, and high. Income is measured using gross national income (GNI) per capita, in U.S. dollars, converted from local currency using the World Bank Atlas method. Latest update: Jul 2023. Due to data

unavailability, Venezuela, (Bolivarian Republic of) classified as an upper-middle income country until FY21, has been unclassified since then due to the unavailability of data.

- **SDGs Reporting:** The country groupings are based on the geographic regions defined under the Standard Country or Area Codes for Statistical Use (M49) of the United Nations Statistics Division and MDG definitions. For the purpose of reporting (SDGs Report 2019) geographical Region have been combined in 8 groups: Sub-Saharan Africa, Northern Africa and Western Asia (further divided into 2 subregions), Central and Southern Asia (further divided into 2 subregions), Eastern and South-Eastern Asia (further divided into 2 subregions), Latin America and the Caribbean, Oceania (further divided into 2 subregions), Europe and Northern America (further divided into 2 subregions). The SDGs data are also presented according to least developed countries, landlocked developing countries and Small Island developing States using the above-mentioned definition. It only considers countries and territories considered by UNSD for the SDGs.
- **FAO Member Countries:** FAO Official Member countries. It doesn't consider territories.
- **FAO Regional Offices:** Regional Office for Africa (RAF); Regional Office for Asia and the Pacific (RAP); Regional Office for Europe and Central Asia (REU); Regional Office for Latin America and the Caribbean (RLC); Regional Office for Near East and North Africa (RNE). It doesn't consider territories.
- **European Union.** EU is composed of 27. The United Kingdom withdrew from the European Union on 31 January 2020.
- As of January 2022, the distinction between "developing" and "developed" countries or areas has been deleted. For FAO statistical reporting any reference to such differentiation shall be discontinued.

[M49 Annex regional groupings](#)

Annex 5: Document history (for internal purposes)

REVISION VERSION	REVISION DATE	AUTHOR	DESCRIPTION OF CHANGES/STATUS
1	10-July-2018	Valentina Ramaschiello; Veronica Gianfaldoni	Version 1 approved by IDWG
2	14-March-2019	Simona Sorrenti	Changes due to new names and alignment to UN terminology and resolution 73/263
3	17-July-2019	Simona Sorrenti	Footnote added for Serbia (exclusion of AP Kosovo and Metohija) as data relevant to FAO statistical domains are mainly derived from the National Statistical Office of Serbia, which do not cover data relative to AP Kosovo and Metohija. The code for Kosovo was restricted to internal use only.
4	14-November-2019	Simona Sorrenti, Valerie Bizier	Country grouping (Annex 4) and addition of 2 codes (381 and 835)
5	19-December-2019		Endorsed by IDWG-TTF on Statistics
6	16-November-2020	Simona Sorrenti, Valerie Bizier	WB income group and WTO Net-food importing developing countries updated; European Union group added; SDGs groups aligned to official regional groups by UNSTATS; numerical codes for groupings added; Channel Islands removed from the country list; renaming of the British Indian Ocean Territory to Chagos Archipelago in line with the UNGA Res 73/295.
